

Pedir el valor de una variable edad

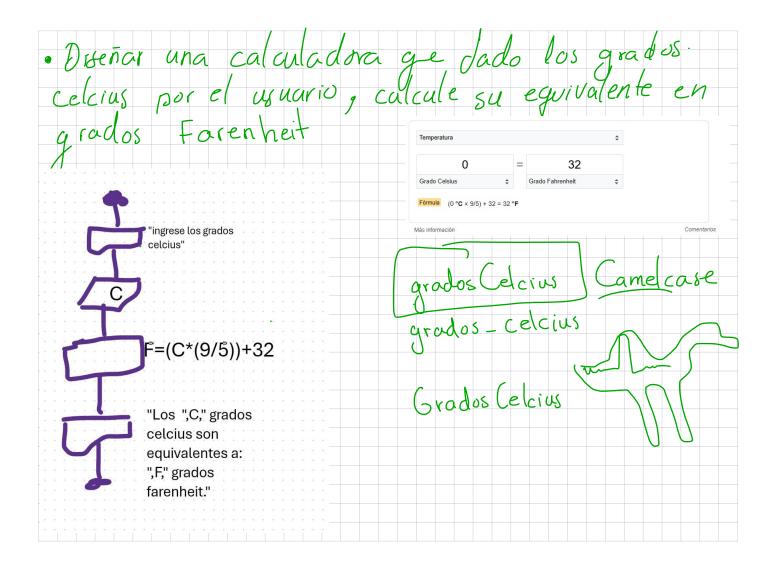

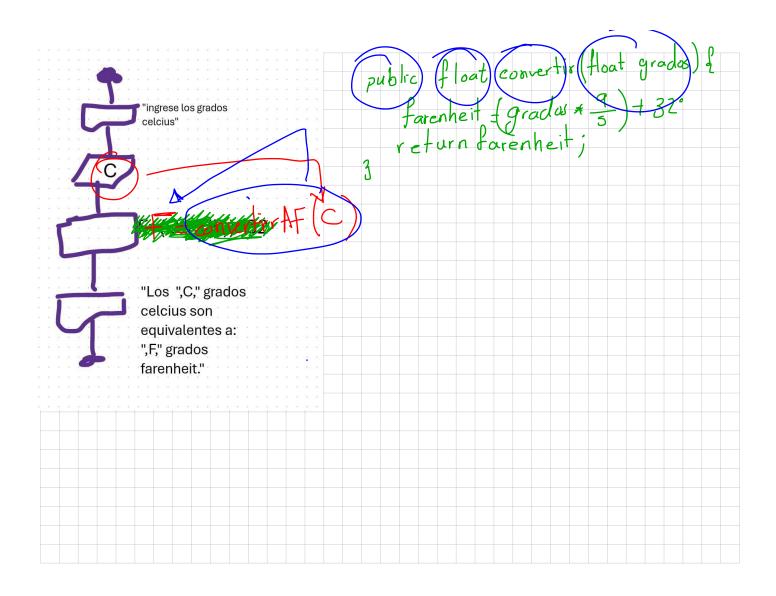

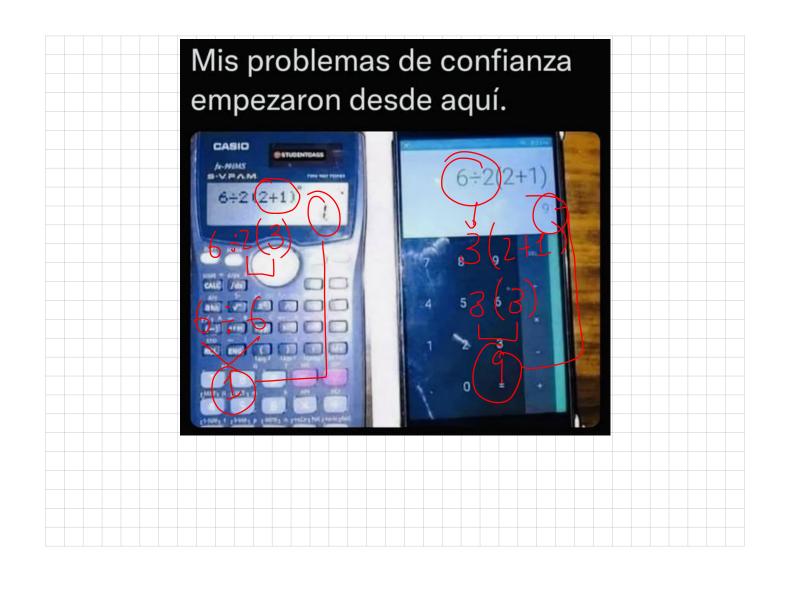

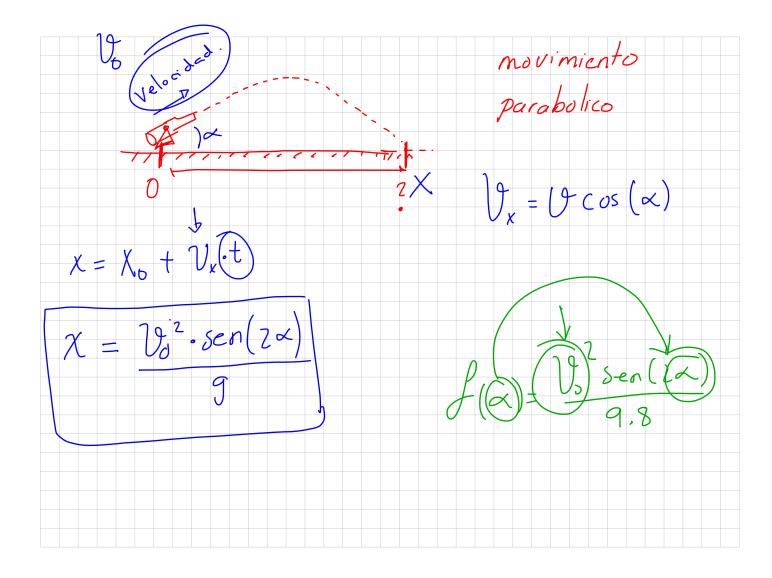

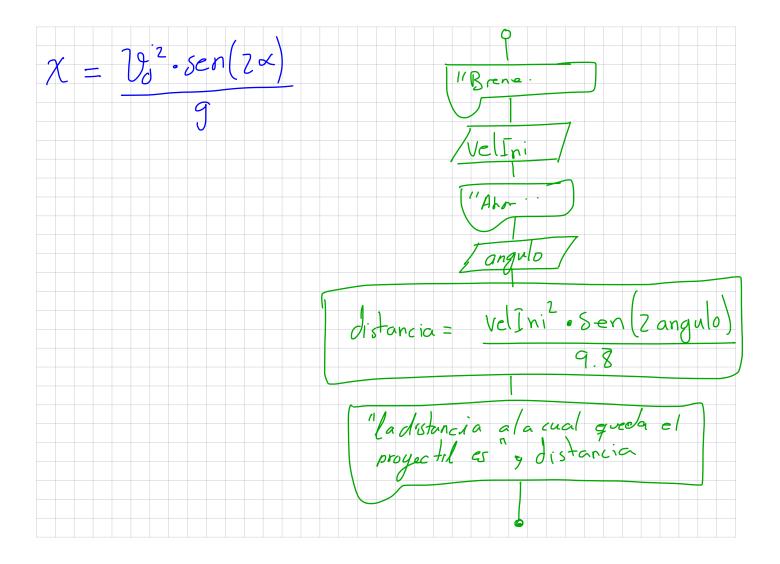

Class	Criterio i Visibilidad	Dato Retorno	Nombre Parametro
Junctions Methods	public private protected	Void Float Short byte double Stim9	

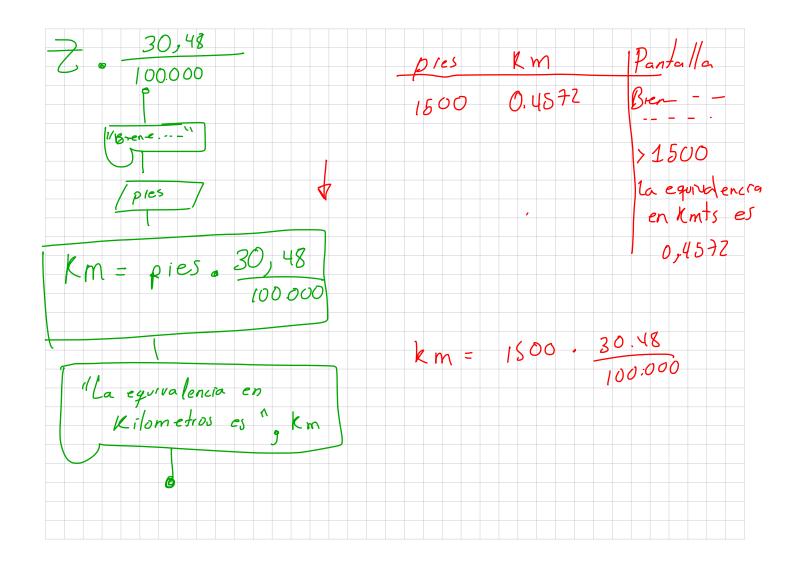

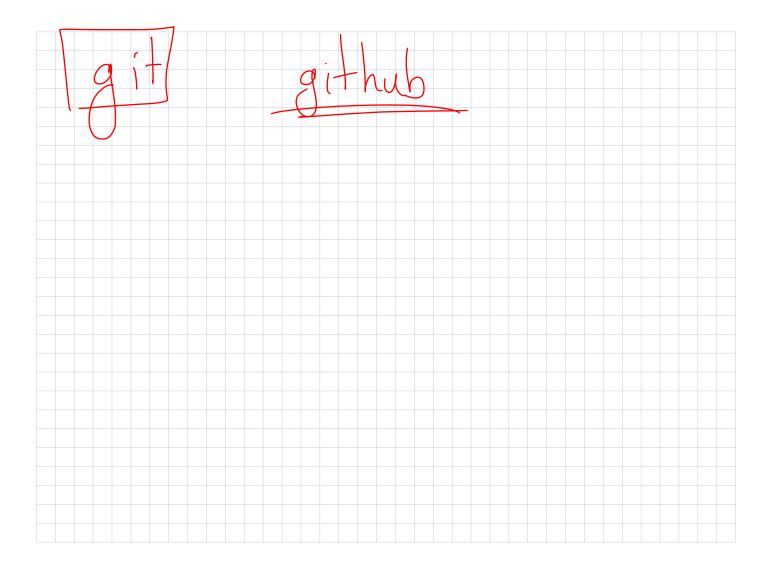

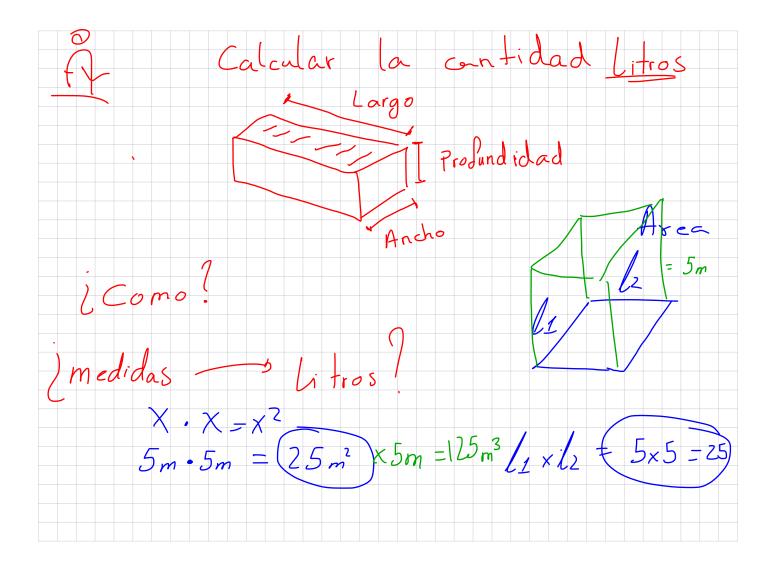

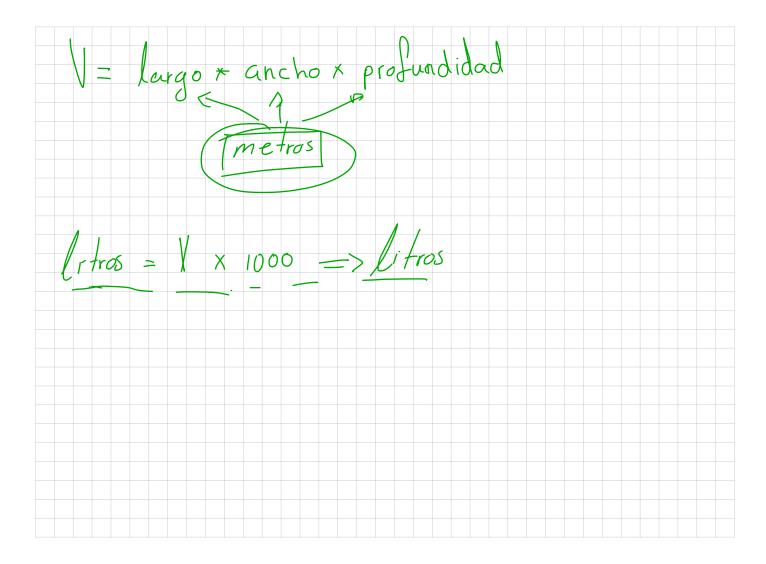

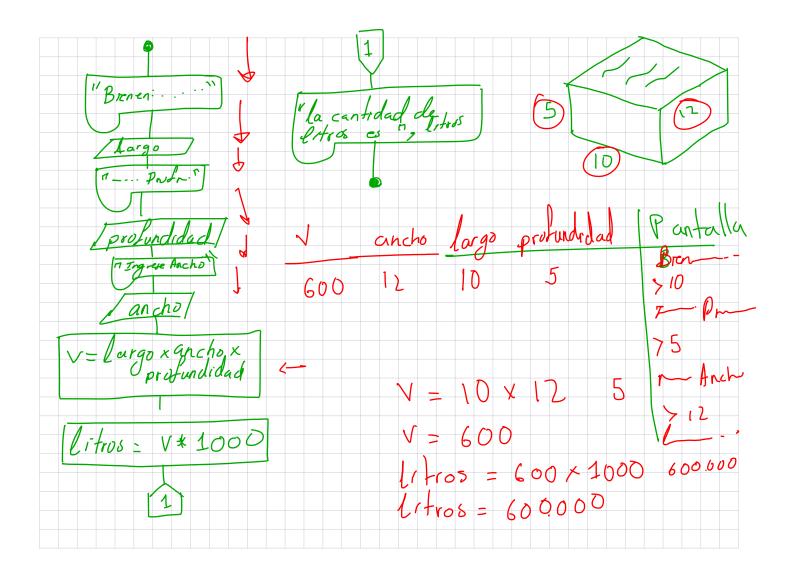

en pies nos diga la equivalencia en les lometros. 1 pie = 30.48cm 100 cm 30,48 100.000

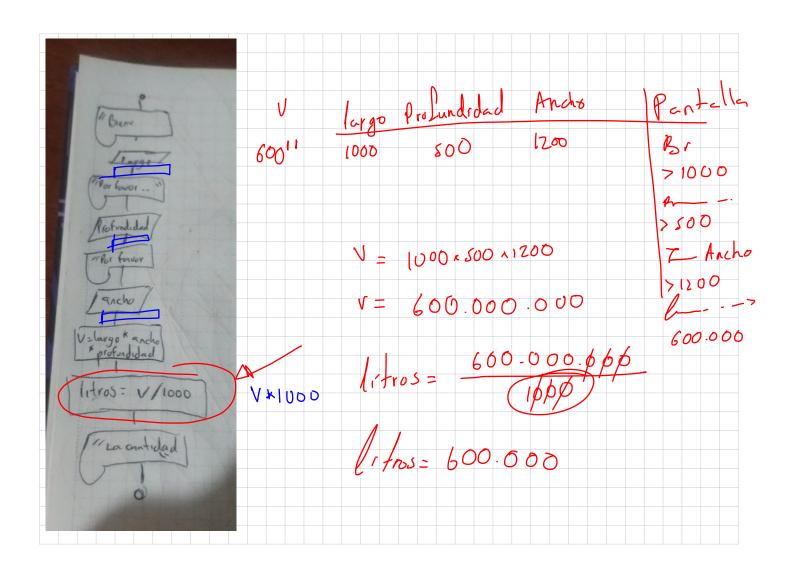

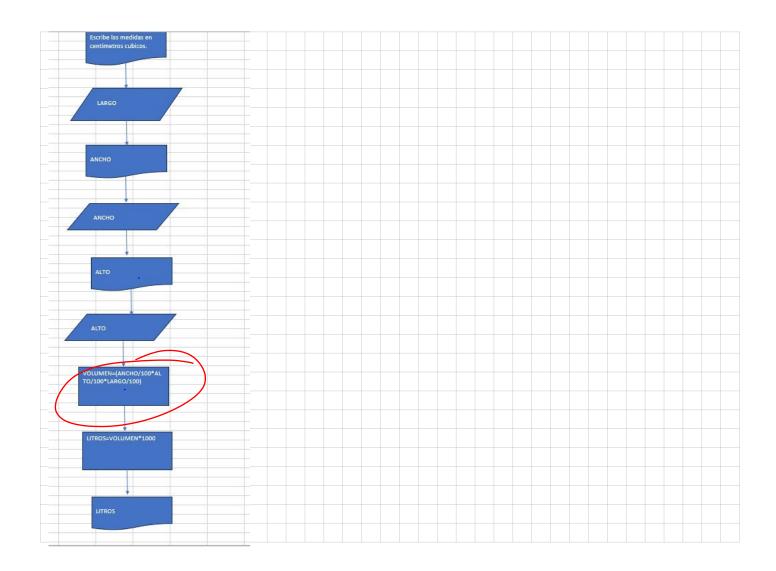

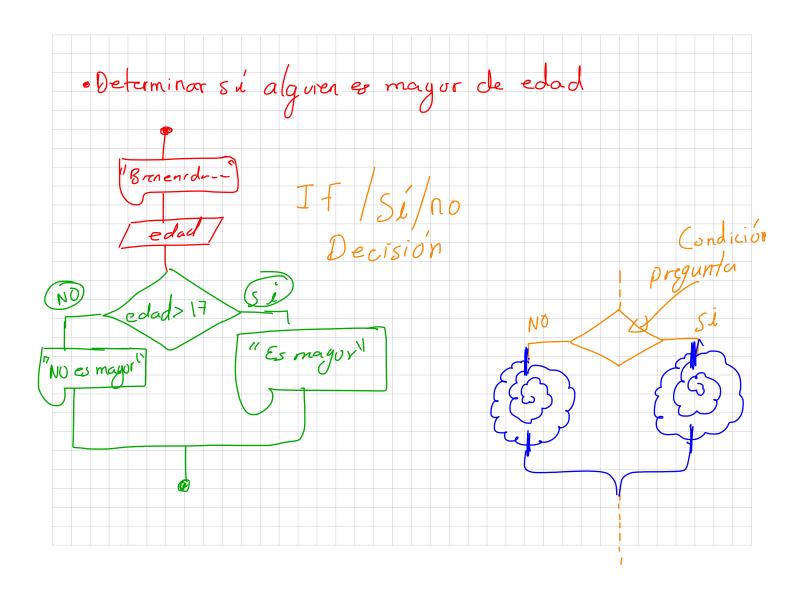

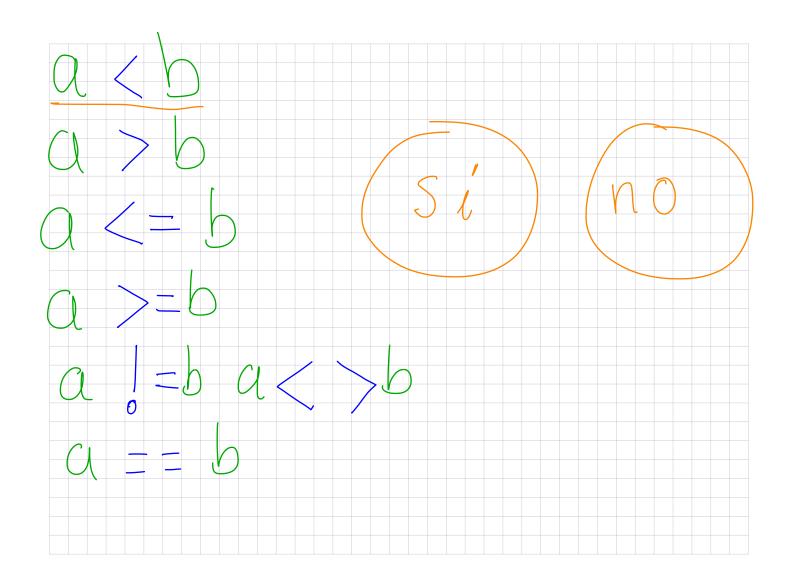

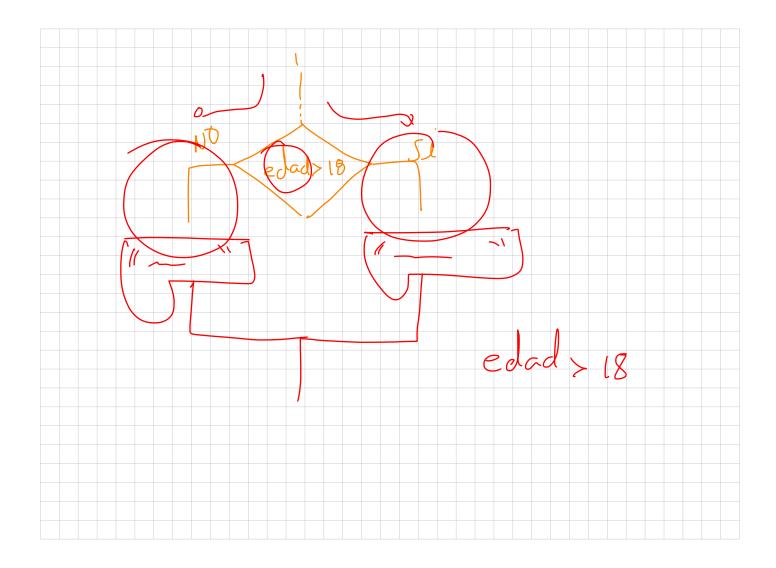

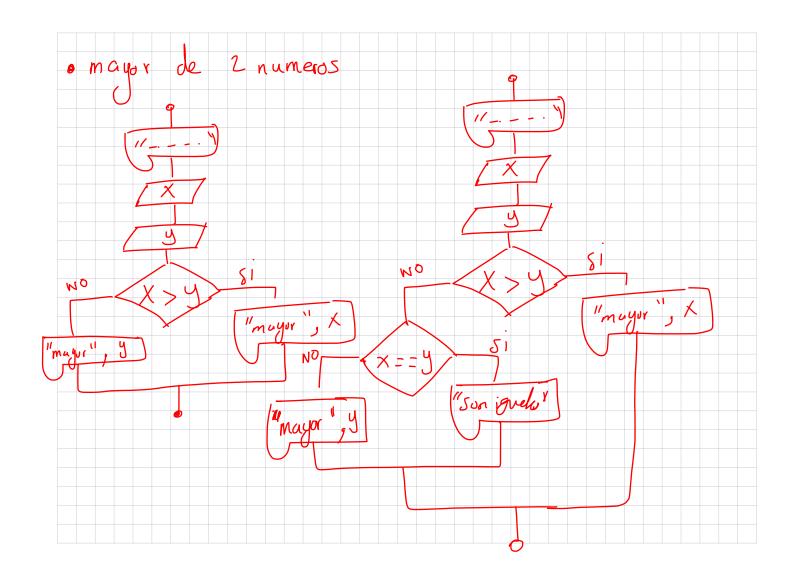

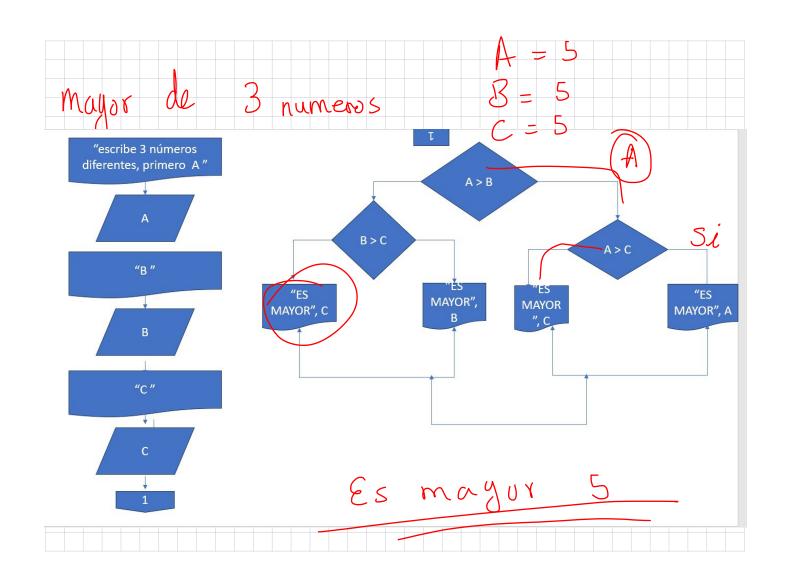

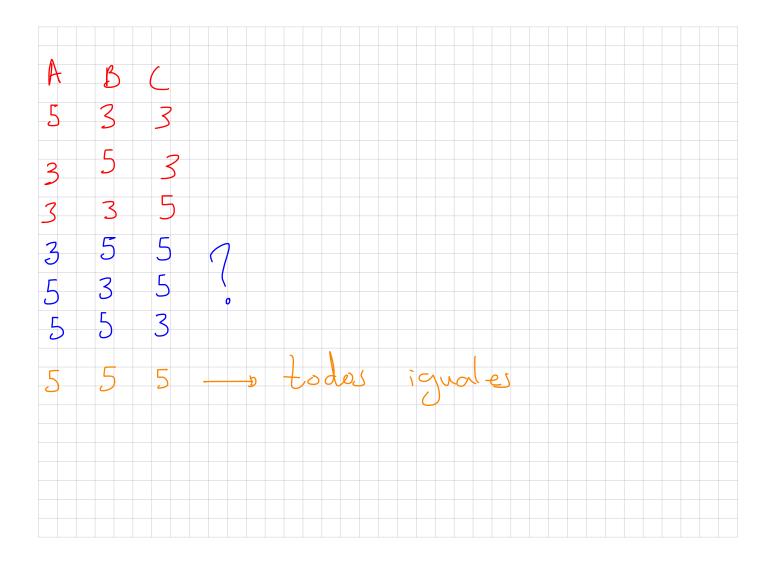

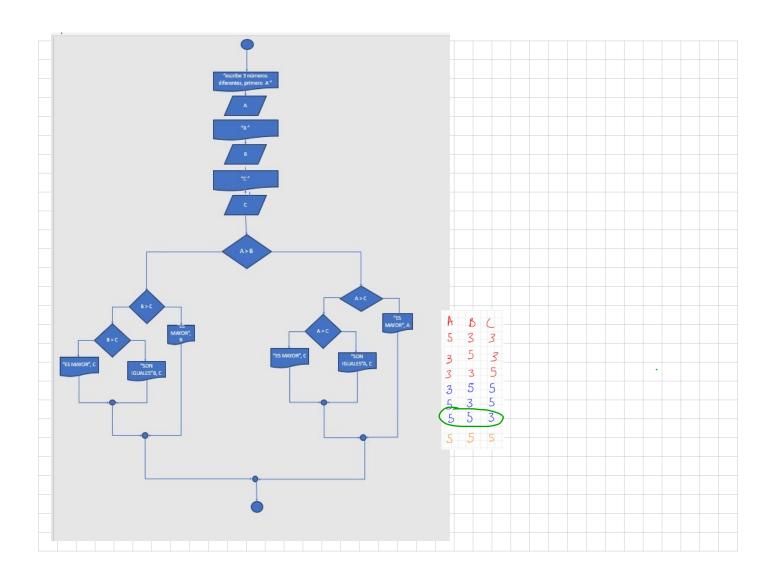

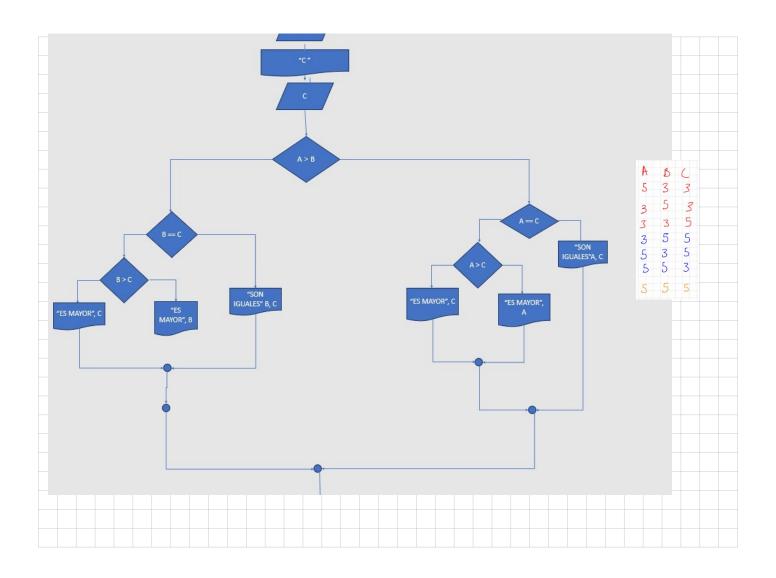

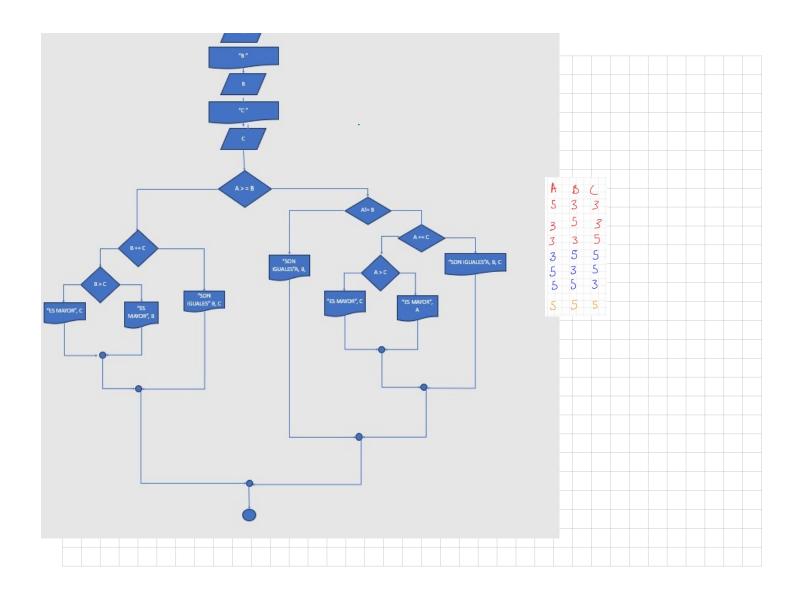

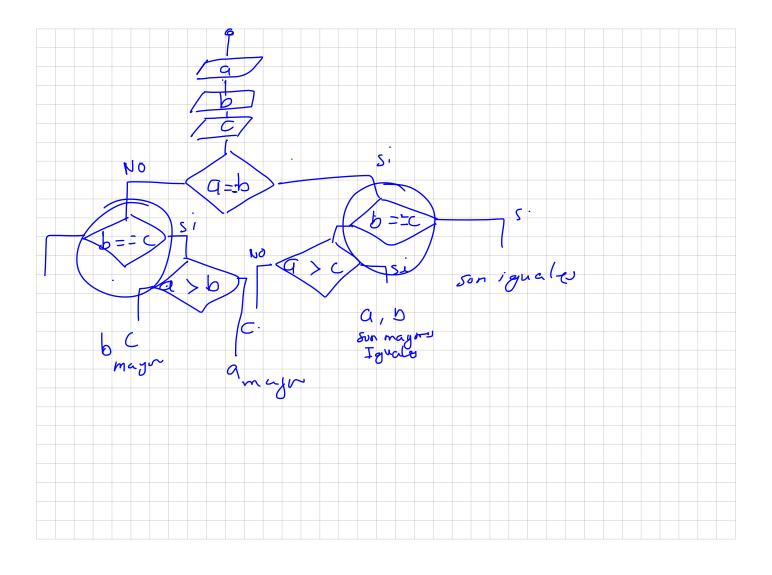

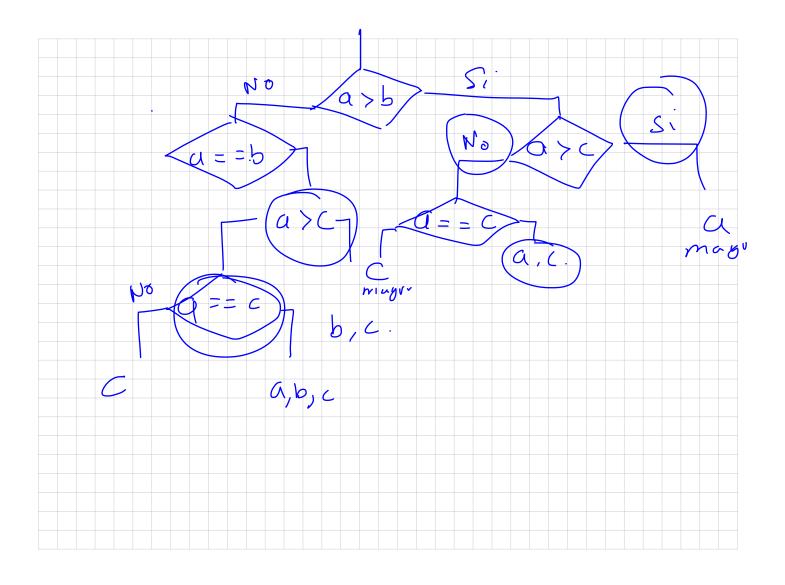

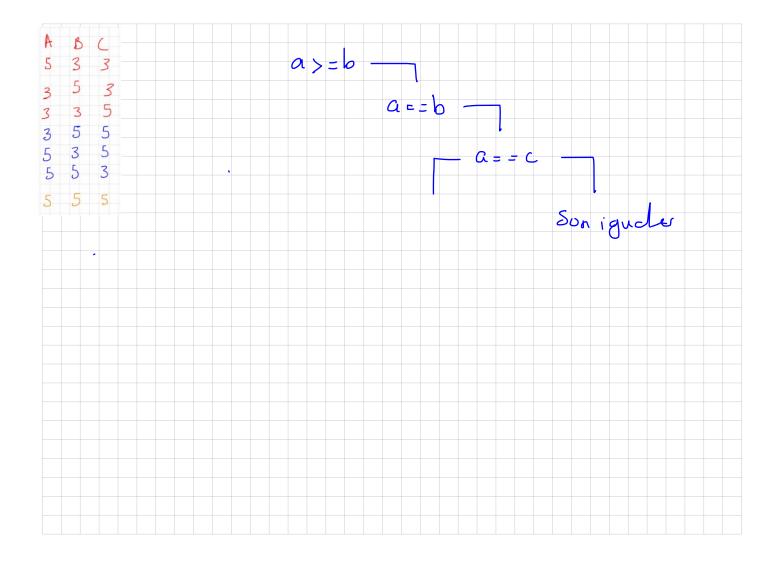

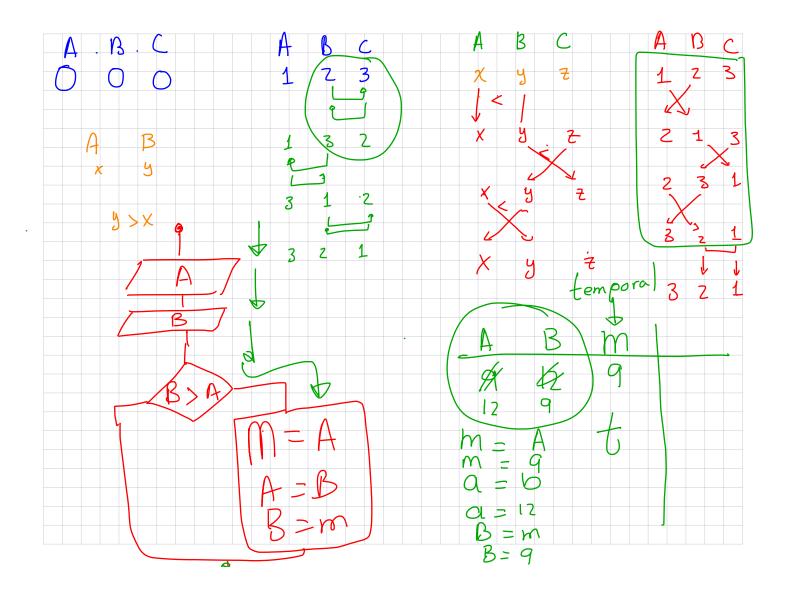

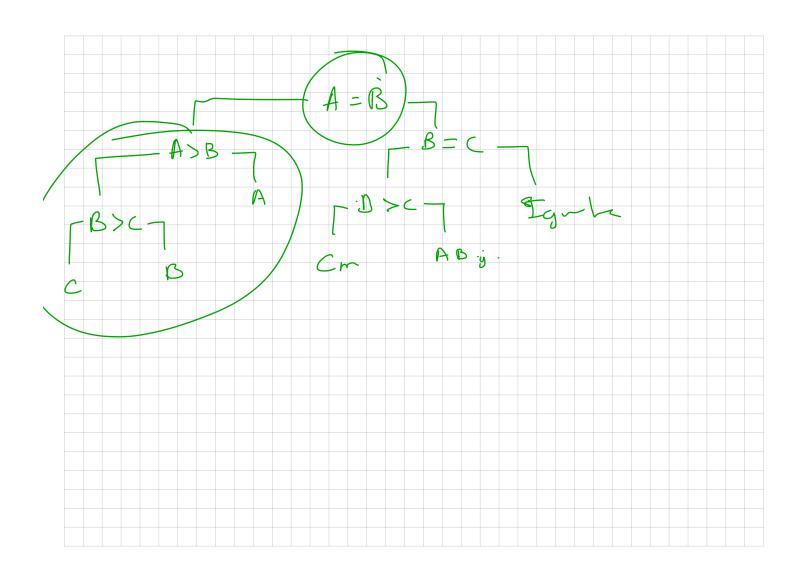

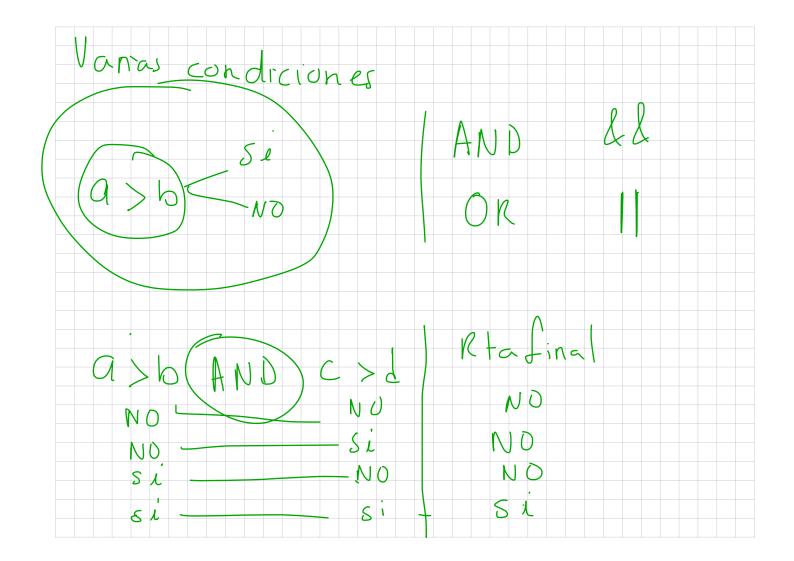

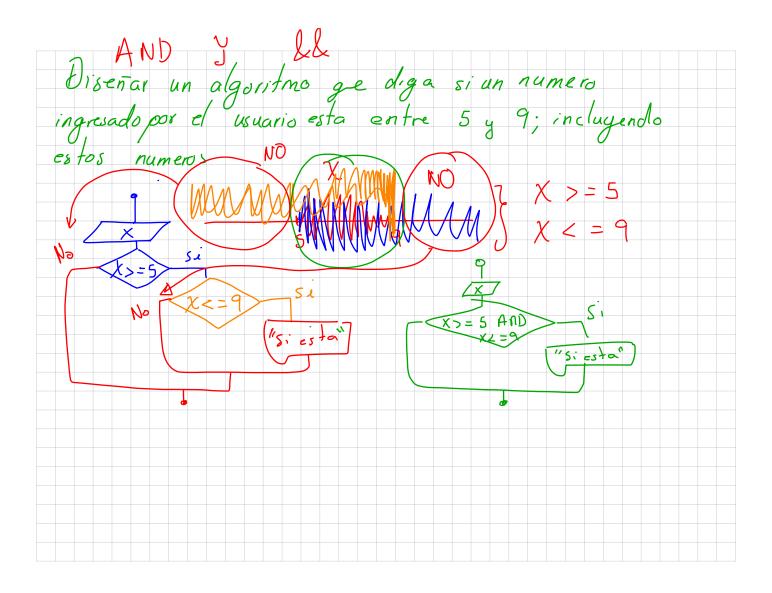

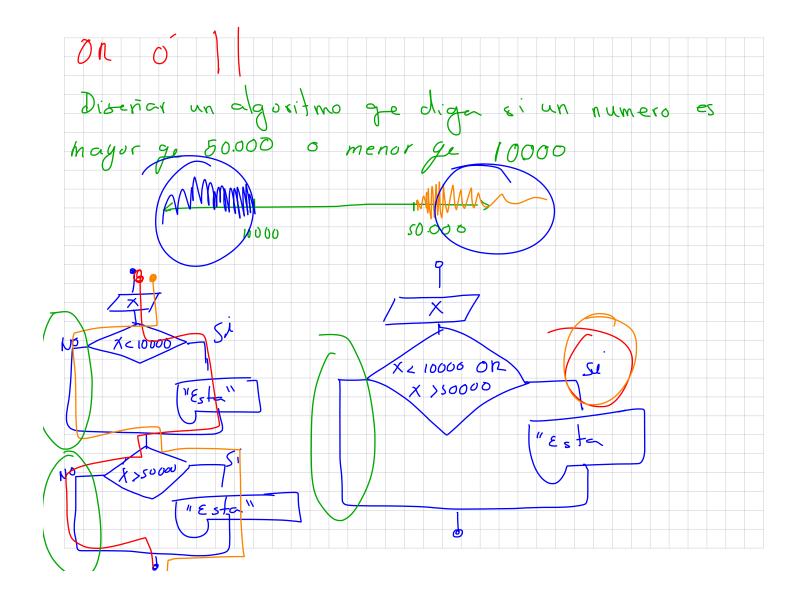

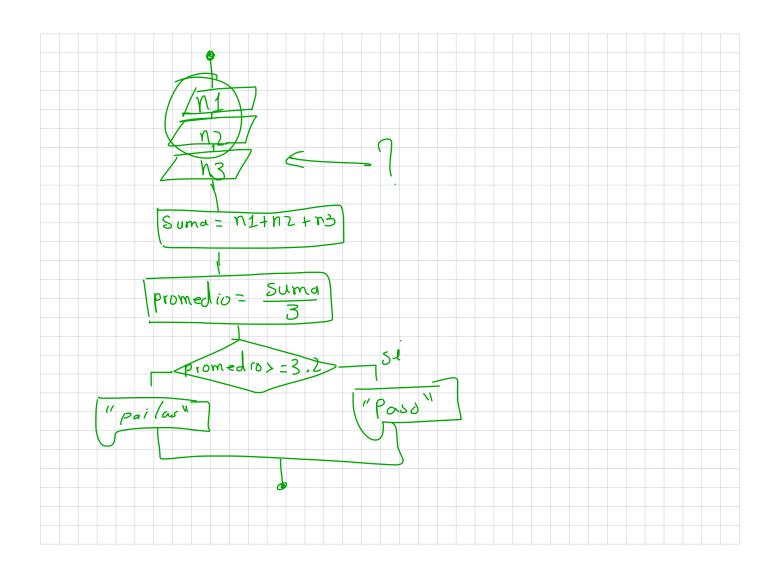

NO NO Si No NO Si a > 0 AND 6 >0) AND (a > 6 on c > 6) Booleana

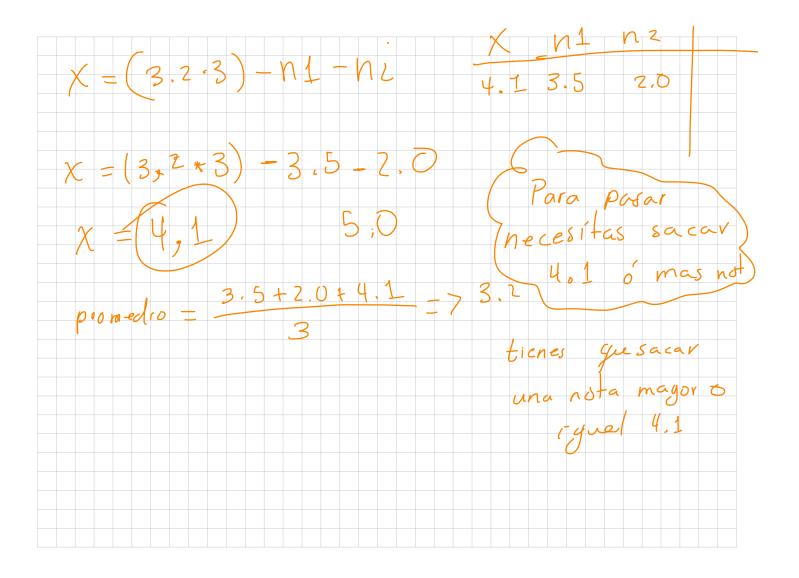

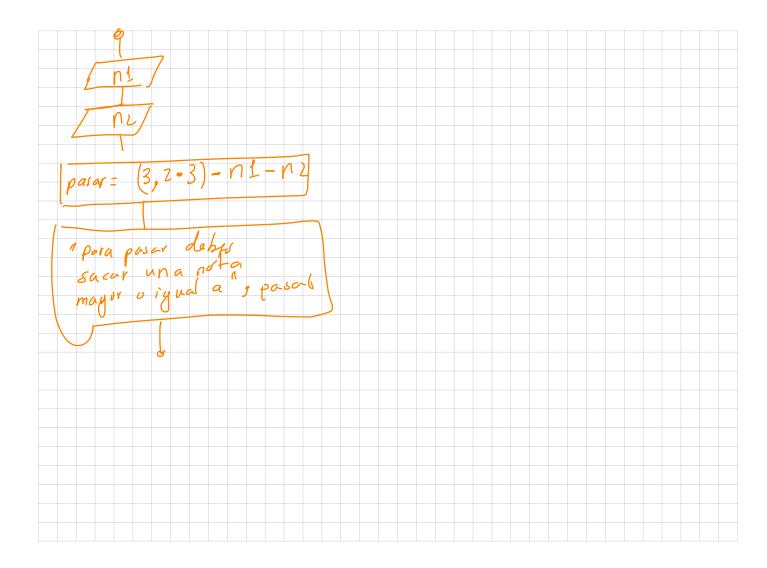

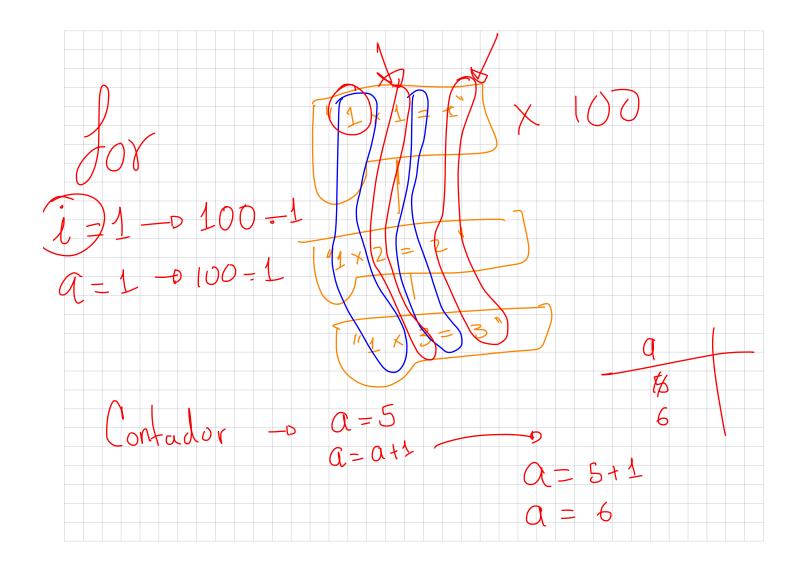

ingresadas por el usuario, calcule su promedio si este es mayor d'igual a 3.7 imprima un mensaje que diga que el estudiante (paso) la materia le locantrario imprimir un mensaje ge diga ger +n2+n3 promedia

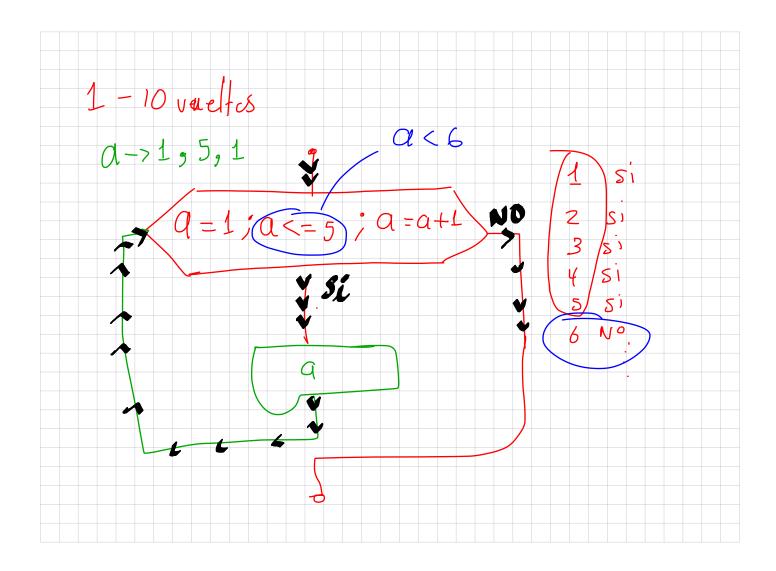

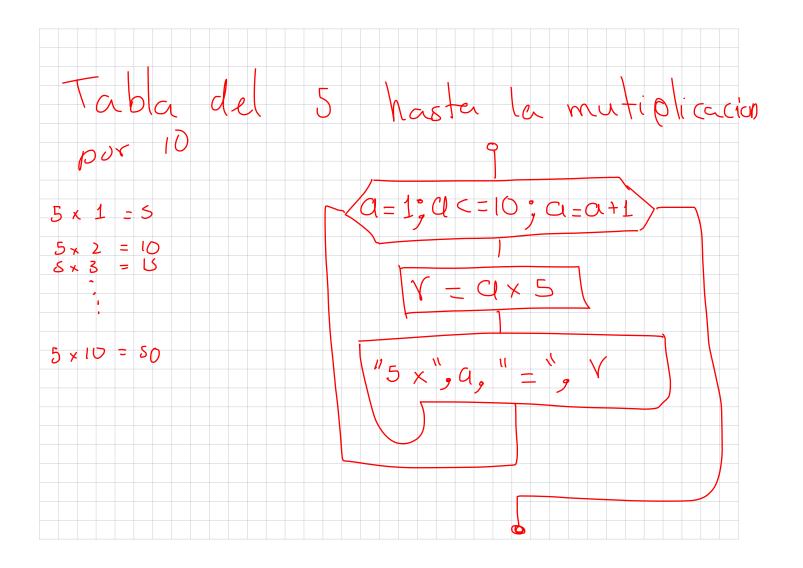

Continuando con el anterior si ya tenemos (as 2 primeras notas; ge algoritmo me diga cuanto necesito para posar. Tenrendo en cuenta ge (a nota para para promedio + (n1) + n2 + n3 3, 2 = 13.2) (3,2*3)-n1-n2=X $\chi = (3, 2 \times 3) + n1 - n2$

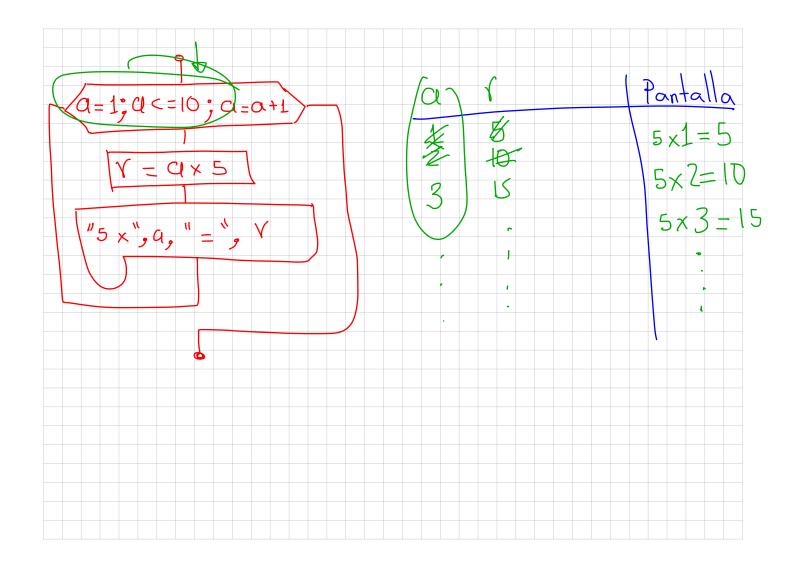

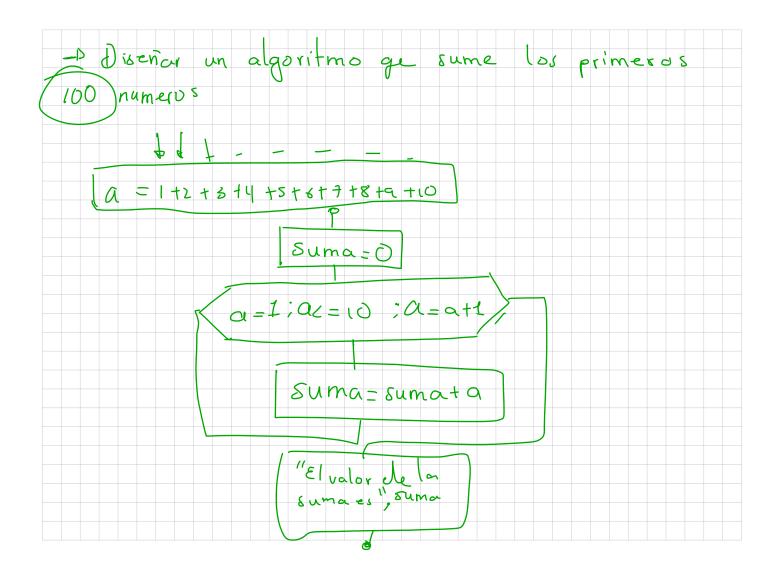

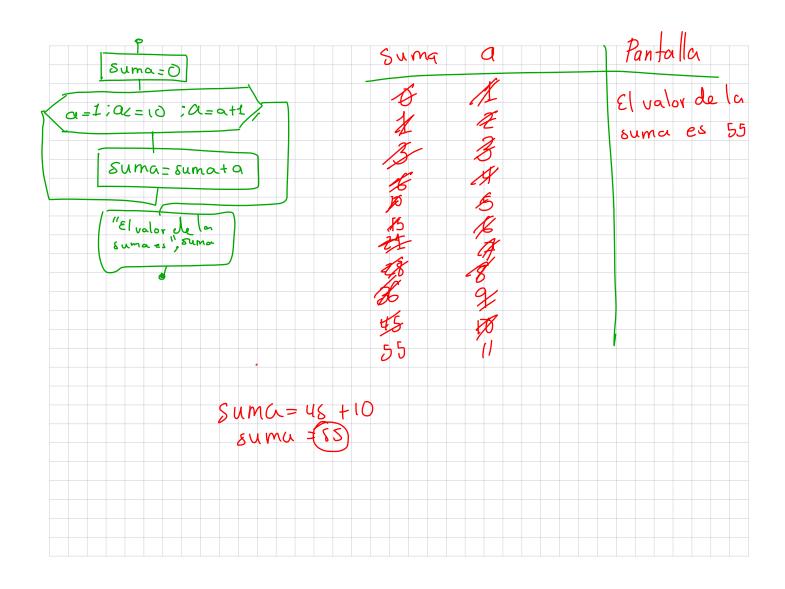

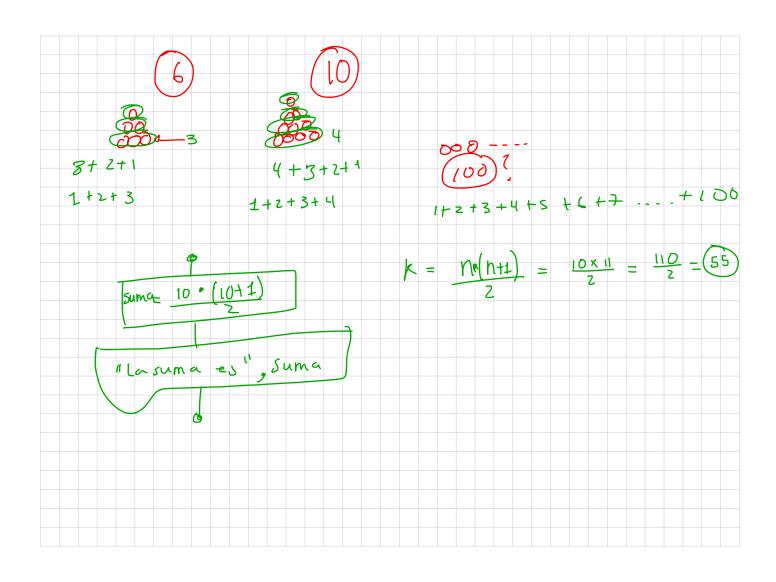

* Algoritmo ge multiplique les primeros n numeros naturales, empezando con el numero 1 factorial. a=1;4<=n;a=a+1 P=P-C "el factorial", P
